

Ying Fu

Phone: (608) 949-4334 Email: ying.fu@wisc.edu

EDUCATION

- **University of Wisconsin-Madison**, Madison, WI, USA
 - Ph.D. in Industrial and Systems Engineering (Advisor: Prof. Kaibo Liu) *Aug 2022 - 2027 (Expected)*
 - M.S. in Computer Science *Aug 2022 - 2025 (Expected)*
- **South China University of Technology**, Guangzhou, China
 - M.S. in Management Science and Engineering *Sep 2019 - Jun 2022*
 - B.S. in Polymer Materials and Engineering and Finance (Double Major) *Sep 2015 - Jun 2019*

Research Interests

My research focuses on leveraging machine learning, including reinforcement learning, and optimization techniques to enhance manufacturing systems. The primary focus areas include:

- Foundational Machine Learning: instance selection and high-cardinality categorical variable encoding.
- Discrete Optimization: 3D dynamic heterogeneous robotic palletization.
- Machine Learning and Optimization Integration: degradation modeling, prognostics and decision making.
- Edge Computing for Distributed Systems.

RESEARCH EXPERIENCE

Optimization

- **3D real-time Robotic Packing**
 - Developed a real-time robotic system for palletizing heterogeneous 3D cartons.
 - Improved collision-avoidance model and optimized Java algorithm for system performance.
- **Advertisement Promotion Optimization**
 - Developed an integer programming (IP) model to maximize revenue in product recommendations.
 - Converted the IP model to an equivalent network flow model, reducing time complexity from exponential to linear.

Data Analytics and Machine Learning

- **Accelerated Classification Training via Instance Selection**
 - Implemented optimized Voronoi-based instance selection in Python.
 - Achieved comparable model performance with 10% of data, verified by numerical experiments.
- **Maximum Homogeneity Grouping for High-Cardinality Categorical Variables in Classification**
 - High-cardinality categorical variables can increase complexity and lead to overfitting.
 - Formulated category grouping as an IP model, solved via dynamic programming (DP).

Data analytics and Optimization for Prognostics

- **Degradation Modeling and Prognostic Analysis Under Unknown Failure Modes**
 - An unsupervised framework using UMAP and time series clustering to identify unknown failure modes.
 - Integrated partial monotonicity into neural networks to enhance degradation modeling.
- **Sensor Selection for Remote Prognostics**
 - Developed a dynamic sensor selection framework for IoT remote prognostics using edge computing.
 - Modeled as an IP problem with local linear approximation, solved by DP.

SKILLS

- **Programming Languages:** Python, GAMS, JAVA, Mathematica, R, SQL, Stan.
- **Software Tools & Packages:** Pytorch, scikit-learn, Gurobi, Git, Bash

AWARDS AND HONORS

- Best Paper Finalist, DAIS Section, Industrial and Systems Engineering Research Conference (2023).
- ISyE Graduate Student Travel Awards, University of Wisconsin-Madison (2023)
- Chancellor’s Opportunity Award, University of Wisconsin-Madison (2022)
- China National Scholarship, Ministry of Education of P. R. China (2017)

INVITED PRESENTATIONS

- INFORMS Conference, “Dynamic sensor selections for remote prognostics”, Oct. 2024, Seattle, USA
- INFORMS Conference, “Degradation Modeling and Prognostic Analysis Under Unknown Failure Modes”, Oct. 2023, Phoenix, USA
- Industrial and Systems Engineering Research Conference (ISERC), “Instance Selection Via Voronoi Neighbors for Binary Classification Tasks”, May 2023, New Orleans, USA

PROFESSIONAL SERVICES AND ACTIVITIES

Journal reviewer

- IEEE Transactions on Automation Science and Engineering

Professional Membership

- Member of INFORMS, IISE, and SME
- Vice President of the SME Student Chapter, 2023-2025
